

# Paul Eilers

**Position** Professor of Genetical Statistics

**Degrees** Ph.D. in Biostatistics  
HTS Electronics

**Research  
Interests** Genomic data analysis  
Chemometrics  
Smoothing  
Longitudinal Data Analysis  
Survival Analysis  
Statistical Computing

**Brief  
Statement** Statistical analysis of high-throughput genomic data (SNPs, gene expression, proteins) is my main area, but besides that I have a wide interest in complex statistical models. My statistical hobby is filtering and smoothing of time series and signals from (chemical) instruments. Doing all these things has given me a lot of experience in statistical computing, programming languages and general data processing.
